SILVERSAFE

Thanks for your trust in the Mightiest Germ Fighter

Introduction: In the traditional Ayurveda, the silver has got its remarkable position due to its antibacterial, antiviral and antifungal and incredible healing properties. It's use as a healing agent capable of decreased scarring and healing time of both skin and bone considerably. This is attributed to the fact that the silver has the ability to stimulate stem cell growth, which promotes healing and minimizes scar tissue, as well as keeping all infection at bay, thus allowing the body's repair systems to work unhindered from the constant barrage of harmful bacteria.

After the discovery of antibiotics the silver was virtually forgotten. As we know that the root cause of all diseases is a compromised immune system complemented with an aggressive attack of pathogens, It's no secret that pathogens such as viruses, bacteria and fungi, can inflict terrible damage in the human body. Dozens of diseases — ranging from the common cold and dysentery to meningitis and pneumonia – all caused by infectious pathogens that often overpower conventional medical treatments. The number of bacteria, yeast and fungi that surround us is alarming. We need a means of defense to protect ourselves and support our immune systems.

Fortunately, a simple, safe and effective alternative as Silversafe comes to rescue. SilverSafe is a silver solution that has a nano-sized core of elemental silver maintaining a positive electric charge – one of the properties most responsible for its antimicrobial properties.

This nano-encapsulated and supercharged particle has four primary mechanisms of action**.**

- **First**, its chemical structure is unique. With each ion's shell missing two outer electrons, the supercharged silver rips electrons from the thin-walled cell membranes of harmful bacteria, rupturing the cells and causing their deaths.
- **Second**, a unique resonance of the metallic silver disrupts and ultimately kills viruses, bacteria, and yeast. The new silver's resonant frequency is in the same range as the blue germicidal lights found in hospitals.
- **Third**, silver's supercharged magnetic attraction binds and incapacitates the abnormal DNA of viruses in direct contact or even within the vicinity of the silver.
- **Fourth,** most cells have a sugar coating used in cellular communications that determines intercellular activity. Silver reacts positively with this sugar coating, which allows the silver particle to enter abnormal cells and destroy the pathogens.

It is remarkable that silver can be so active against pathogens while remaining virtually non-toxic to humans.

Taking SilverSafe in the body:

SilverSafe can enter the body directly by at least four different means.

The **first** way is ingestion (swallowing it).
The **second** way SilverSafe can pass directly into the body stream is by sublingual absorption i.e. absorbed from under the tongue.
The **third** is rectally. Once in the intestine the SilverSafe is absorbed directly into the blood, and is circulated throughout the body.

The **fourth** is through the lungs by using a nebulizer, to convert the SilverSafe into micron size droplets, and then inhaling these droplets.

Objective of any successful treatment:

Even with an excellent SilverSafe, one cannot successfully treat ANY condition, unless one can deliver the SilverSafe EFFECTIVELY to the infected area. Remember that statement, because it is literally the key to any effective SilverSafe treatment! If it is not working, you are not delivering it effectively! This is not always as easy as one might think! There are a few tricks, which will GREATLY improve the effectiveness of the treatment, and your chance of success. Below are some suggestions which will increase the effectiveness of one's SilverSafe treatment, for any of a number of common ailments. Some small details, like in some cases, massaging the SilverSafe in, for example, literally make all the difference between success, and failure. While SilverSafe is capable of killing ALL pathogens, delivering it to the pathogen, once the pathogen has entered a human body, can in some cases be extremely difficult, but not impossible! While SilverSafe may kill a pathogen on contact, within minutes, outside the body, the limited ability to effectively deliver SilverSafe inside the body, to some pathogens, will most likely cause one to require repeated, regular treatments, in the most effective manner possible, over a period of time, in order to fully eliminate the pathogen.

SilverSafe as a Prophylactic/Preventive Dietary Supplement

SilverSafe, as a preventative is unsurpassed. Sufficient SilverSafe taken daily precludes infection, disease, contagion and serious toxicity. Taking **SilverSafe daily** is like having a second immune system. It lessens the load on the body's natural immune system and effectively kills the many bugs present throughout the body. In addition, it lessens the toxicity due to the average amount of germ, virus and fungus activity that occurs naturally in the body.

Simply add one teaspoon (5ml) per liter (accordingly maintaining the proportions) in your drinking water container and continue to drink from it. It will keep the water sanitized for hours along with supplement you with your maintenance dose.

Silversafe as Hand Sanitizer

When the winter months set in, it is but obvious that the winter cold and flu season hits you in full swing. When the summer months hit the town, bacteria and viruses often do the damage. Whatever the season may be, viruses, germs, and microorganisms do thrive and circulate everywhere. While everyone tries to dodge them, there is no escape from these viruses known as the major cause of intestinal illness, and the root of outbreaks at schools, open playgrounds, and hospitals.

The question that arises is how to best avoid these infections and the answer is through personal hygiene. Hygiene is not limited to bathing or wearing clean clothes, but a thorough hand washing is one of the typically recommended activities to seriously consider if you want illness to stay at bay. One must understand that keeping your hands clean through improved hand hygiene is one of the most important steps in order to avoid sickness and the spreading of germs. Many diseases and illness are spread through your hands and by not washing your hands thoroughly, you make yourself more susceptible to these viruses and moreover, you can even transfer it to others.

Hand sanitizers are available as clear gels packed in plastic bottles that are easily available in any supermarket, medical store, and convenience store. They are available in large sizes and small travel-pack containers and are commonly used in places where germs are a concern.

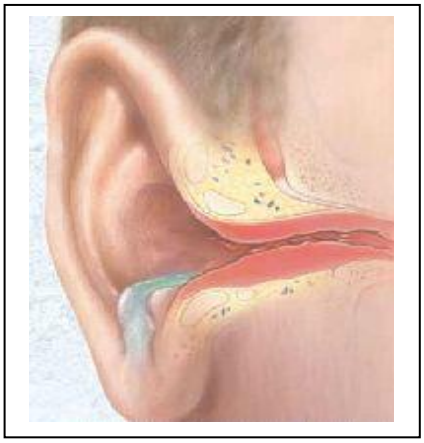
Majority of sanitizers use alcohol as a base which has got following limitations as compared to using Silversafe as a Hand sanitizer.

Why choose Alcohol-free?	
Alcohol Based	SilverSAFE **(Alcohol free)**
Contains 65% alcohol Flammable Dries out skin causing irritation Not suitable for children Harsh, lingering smell Tarnishes and discolors surfaces	Non-flammable and non-toxic Won't dry out your hands Safe & natural Lasts more than 2 times longer than alcohol based gel Fragrance free Won't sting or cause irritation

Medical Use of SilverSafe

Sinus Infection- Lay on a bed on your back, and tilt your head way back over the edge of the bed, inverting your sinus. With an eye dropper, drop drops into your nose in sufficient quantity to flood into your sinus cavities. Remain in that position for a few minutes, in order to keep the SilverSafe where your sinus cavities are, possibly adding more SilverSafe. Move your head around slightly, during those minutes, in order to insure the SilverSafe penetrates you sinus cavities well. Gentle and slow in and out controlled breathing through the nose may also increase penetration of the SilverSafe. Do not breathe so hard as to suck down, or blow out the SilverSafe. The idea is to increase contact, and penetration, not eliminate the SilverSafe. Repeat frequently throughout the day, until you achieve the desired result.

Ear Infection - Tilt your head sideways, so that the infected ear is up. Using the Eye Dropper, fill the ear with SilverSafe, in sufficient quantities to flood your ear. Keep your head that way, moving it around slightly in order to insure the SilverSafe penetrates, as well as possible. Keep your head that way for several minutes, in order to allow the SilverSafe time in the ear. Do this once in the morning, and once at night. Increase dosage if necessary. Repeat frequently throughout the day, if possible. Continue treatment until you achieve the desired result. It will take about a week, to 10 days to cure. If the infection is inner ear, it can take 2-3 weeks to cure. The SilverSafe will immediately relieve any itching, or burning sensations.



Eye Infection (Conjunctivitis) - Tilt your head back, and using the Eye Dropper, drop one drop of SilverSafe into your eye. Repeat frequently throughout the day, until you achieve the desired result. If infection returns after

it is cured, it may indicate that the infection is in the sinus. They are connected. Try attacking it from both ends, the eye, and the sinus.

Respiratory Tract Infections - Use a nebulizer, loaded with SilverSafe, and breathe the SilverSafe mist deep into your lungs. Repeat as needed to clear the infection.

Tonsil/Sore Throat / Strep Throat - Use a small spray bottle containing SilverSafe, and open your mouth and spray the back of your throat frequently, throughout the day, until you achieve the desired result.

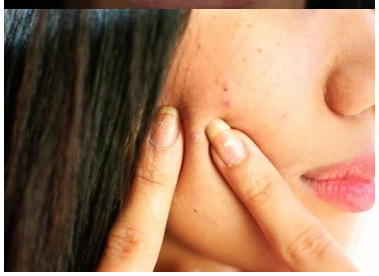
Cuts - Spray SilverSafe onto the wound, and dressing to prevent infection, and promote healing. SilverSafe does NOT Sting or burn. SilverSafe may be used as the only medication on the dressing, or it may be used with another medication. Continued use of the Colloidal will minimize scarring.

Burns - Spray SilverSafe onto the burn, and bandage. Bandage lightly, keeping the bandage moist with SilverSafe. Change the bandage daily.

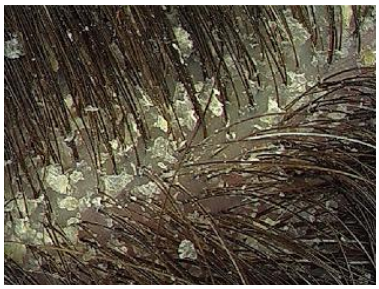
Eczema and skin rash - Dab SilverSafe directly onto affected area, rubbing slightly. Repeat often to keep the area moist with SilverSafe. Bandage lightly, if desired, keeping the bandage moist with SilverSafe. Change the bandage daily. Massaging SilverSafe improves effectiveness.

Warts - Cover the wart with a small adhesive bandage saturated with a few drops of SilverSafe. Keep the bandage moist. The wart should disappear within a few days. Large warts may take a few days longer to disappear.

Acne/Pimples - In addition to omitting sugars, fats and chocolate from the diet, any person with acne should wash and rinse the face thoroughly four times a day. After each rinse, take a small amount of SilverSafe and massage it onto the problem areas two to three times with a finger, a tiny piece of cotton, or tissue. This wash-rinse-massage activity may be continued throughout an acne breakout. It may also be used as a continuous prevention through the teen years. This continuous habit precludes breakouts, leaving the skin continuously clear. Most people find it helpful to carry a small bottle of SilverSafe with them, for availability throughout the day.



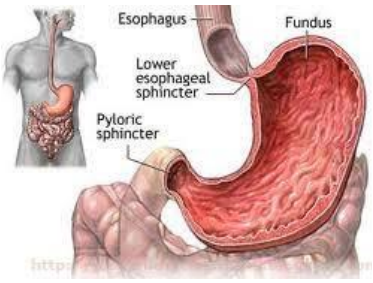
Dandruff – In the night before sleeping, wet the scalp with SilverSafe, using the spray bottle, and then briskly massage the SilverSafe into the scalp. Part the hair into small sections, and apply to small areas at a time, massaging it into the skin! Massage into the skin using fingers, and / or a soft brush. Continue until flakes are gone, then you may reduce treatment to twice per week. Repeat frequently, until you achieve the desired result. Add SilverSafe to shampoo. Shampoo can temporarily remove oils from the scalp, which may be preventing the SilverSafe from reaching its target.



Teeth, Inflamed gums, and / or excessive plaque - Brush the teeth once daily with SilverSafe. That will eliminate any gum disease, and the bacteria that cause plaque. Use a NEW toothbrush, dip it in, or spray it liberally with SilverSafe, and brush. Do not use tap water. Shake brush out when done, and let dry, for next time.

Intestinal Problems / Digestion – Put/Spray the recommended daily amount of SilverSafe, into the beverage of choice accompanying any meal. As the food is digested, the presence of SilverSafe will keep the food

from putrefying in the digestive tract, killing any germs ingested with the food, and leaving the food more useable. Also there may be reduced flatulence.



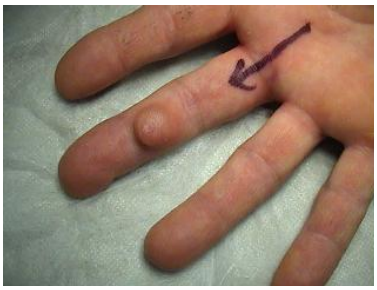
Stomach or Intestinal Virus - Gastroenteritis - Take 2 teaspoons(10ml) or more of SilverSafe, followed immediately by a good sized glass of water to push the SilverSafe into the intestine, rather than allowing it to be absorbed by the stomach.

Cholera, Diarrhea and Diarrhea Diseases - A number of diseases such as cholera, canine parvovirus or other diseases, where the pathogen resides mainly in the large intestine, can be fatal. The fatality is mostly due to the dehydration of the body resulting from severe and prolonged diarrhea and vomiting. The pathogen causing the problem is active in the large intestine, the one place where SilverSafe when used correctly will not penetrate. There are two different methods to overcome this barrier. The first is to take 2 tablespoons or more of SilverSafe, together with three or four big glasses of water, on an empty stomach. This way the SilverSafe will get into the large intestine, and should within a short time, take care of the problem. The other method is by way of Colonic Irrigation. Preparation is by mixing SilverSafe with sterile water in the ration of 1:10. This method in fact brings the fastest relief from the disease.

Parasitic infections - Take 5 teaspoons of SilverSafe, to preclude parasitic diseases caused by tiny, worm like animals that burrow through a particular organ, or in some cases throughout the entire body. In every case, these parasites reproduce by laying eggs and these eggs have the same characteristics of the oxygen-metabolizing enzyme as the single celled bacterium. These eggs cannot hatch when there is sufficient SilverSafe in the surrounding body tissue. They are killed

within a short time and subsequently eliminated by the immune system.

Cysts - Spray each cyst with SilverSafe, and continue taking supplemental maintenance dose. It will eventually turn black and burst.

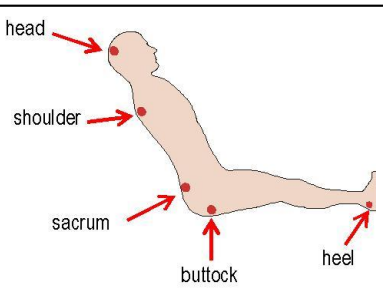


Jaundice Jaundice, is yellowish discoloration of the whites of the eyes and mucous membranes caused by increased levels of bilirubin in the blood. Take 2 teaspoons(10ml) or more of SilverSafe, in a glass of drinking water three times a day. Continue till the problem subsides.

Body Odor: Using silversafe as a body spray will help eliminate bodily odors including, Bad Breath, Foot Odour, Under Arm Odour and any other body odours caused by bacterial build up. After taking a shower just apply/spray Silversafe on areas of body which are more prone to sweating. Do not rinse after spray.

Diabetic Ulcers Keep the ulcerative foot soaked in a pit containing 1:5 solution of Silversafe and water for 15-30 minutes before sleeping. Does not rinse just wipe out the liquid afterwards with cotton. Dab SilverSafe directly onto affected area, rubbing slightly. Repeat often to keep the area moist with SilverSafe. Bandage lightly, if desired, keeping the bandage moist with SilverSafe. Change the bandage daily.

Bedsore: Pressure ulcers, or bedsores, are easily cured by topically applying gauze soaked in silversafe. Do not put pressure on the sore.



Candida Yeast: Take 20ml of silversafe three times a day preferably by sublingual absorption. Also apply it topically on the infected area. Continue until symptoms subside.

Non Medical Uses of SilverSafe

Personal care:

1. Spray under arms as a deodorant. Do not rinse. It will kill all odor causing bacteria and molds.
2. Use as an aftershave to prevent exposed skin to pathogens
3. Use for gargling to ease throat.
4. Mouth Wash: SilverSafe is very effective in killing germs and plaque in the mouth. Using SilverSafe as mouthwash in night before sleeping is great for tooth infections and bad breath
5. Clean under nails, in ears and navel with a soaked Q–tip.
6. Wipe hearing aids and eyeglass frames.
7. Spray contact lenses.
8. Keep dentures and toothbrushes soaked in Silversafe: SilverSafe can help sterilize toothbrushes
9. Spray on cosmetics.
10. Add to a bath, douches and colonics: SilverSafe can help kill germs/pathogens on the skin
11. Spray on shower and bath mats: Colloidal Silver can help sterilize bathroom floors, toilets and sinks

Kitchen:

1. Spraying on garbage can to prevent decay odors: SilverSafe effectively kills odors.
2. Add a small amount to leftovers and condiments before storing in refrigerator: SilverSafe can help to keep food from spoiling.
3. Spray and Rinsing fruits and vegetables: SilverSafe promotes the shelf-life of fruits and vegetables.
4. Adding to milk to prevent spoiling: SilverSafe kills the bacteria that cause spoiling in milk.
5. Spray food storage area, interior of refrigerator, lunch kits, and garbage containers: SilverSafe can kill surface germs/pathogens.

6. Spray cutting boards, sponges and dish cloths.
7. Spray kitchen counters: SilverSafe can kill the bacteria on kitchen surfaces.
8. Pour a small amount into the dishwasher as a rinse additive: SilverSafe can kill odors and can remove any leftover bacteria.

Household Cleaning:

1. Spraying air conditioner filters after cleaning: SilverSafe helps prevent airborne pathogens.
2. Swabbing air ducts and vents: SilverSafe kills the pathogens on air ducts and vents.
3. Treating pools, fountains, humidifiers, hot tubs, baths, dishwashers: SilverSafe keeps mildew from growing.
4. Spraying inside of shoes: SilverSafe kills odor-causing bacteria.
5. Scrubbing toilets, tile floors, sinks, urinals, doorknobs: SilverSafe kills bacteria and odors.
6. Add to cleaning solutions.
7. Wipe telephone mouthpieces and head phones.
8. Rinse toilet seats and bowls, sinks, tiling and doorknobs.
9. Spray on carpets, drapes, mattresses, furniture, and window sills.
10. Spray on Keyboards and mouse.

Laundry:

1. SilverSafe helps prevent damp clothes from becoming moldy.
2. Put a tablespoon 5 teaspoons) in the washing machine so as to remove odor from clothes(Samsung uses this technology).
3. Make a 1:10 ratio mixture of SILVERSAFE in water. Allow the innerwear to be dipped in the said solution for 10 minutes and then to be put into sun/dryer without rinsing so as to remove odor.

Clothes:

1. Spray in shoes and on socks.
2. Mist clothes before storing.
3. Spray in gloves.
4. Spray onto watch bands.
5. Add to rinse water of laundry-especially for diapers.

Pets

1. Spraying pet bedding: SilverSafe kills the odor-causing bacteria on pet bedding.
2. Give to pets in water and bath: SilverSafe can help skin conditions and internal conditions.

Plants:

1. Spray on plants.

Other:

1. Add to picnic foods containing mayonnaise to prevent food poisoning.
2. Disinfect Children's toys, as well as items in contact with many people safely, non-toxically, and prevent the spread of colds, and flu.

Drinking Water Sanitizer on Travel:

During travel, drinking contaminated water is one of the major sources of upset stomach. SilverSafe is an excellent water purifier. Water containing biological contaminants (not toxic chemicals) can be made safe, by adding 2 teaspoon of silver per liter of water**.** The Silver, while purifying the water is also beneficial to the body, unlike the commercial tablets containing toxic chlorine bleach causing cancer by forming carcinogenic byproducts of disinfection!

Note: This does not remove debris, or harmful chemicals from water; it only neutralizes biological contamination in water making it safe to drink.

In Emergency situations when silversafe could be extremely useful

1. Someone encountered an accident and a nasty open wound on the body.
2. Someone 'have eaten something dodgy' and is now laid out in bed with diahhorea, fever and/or vomiting.
3. An epidemic has broken out.
4. A terrible case of cystitis and the medical drugs are ceasing to work.
5. A bullet, bomb or shrapnel has hurt someone with open wounds and contaminated environment
6. A vessel of water needs to be disinfected so it can be safely drunk.
7. A biological military attack has just occurred and the deadly biohazards must not be inhaled.
8. Burns injury in a contagious environment.
9. An animal having a terrible case of worms and is nearly dead.
10. Situations where antibiotics are failing to perform.

6 Reasons to use SILVERSAFE

1. **Scientifically Supported.** Lot many research lab reports and research studies have documented the benefits of using silver as antimicrobial agent. In fact, scientists have found that the silver solution can destroy 99.9% of all bacteria, viruses, molds, fungi and other pathogens it has been tested on within minutes of exposure. These include malaria, common cold and flu viruses, numerous molds, methicillin-resistant staph (MRSA), salmonella, E. Coli, and streptococcus, among many others.
2. **Super-Flexible.** The new silver solution boasts multi-faceted applications. It can be used inside the body (internal), as well as on the skin and in the orifices (external). Silver sol can also be used as a tremendously effective household disinfectant, much like bleach or other cleaners – only it's much safer!
3. **Quick Kill Time.** Many medications dealing with conditions such as skin fungus or other infections can take weeks to work. The new silver solution, however, can be effective in just a few minutes. The new silver begins to destroy pathogens in seconds and completely destroys them when in direct contact for 2-20 minutes.
4. **Inexpensive.** When you add up the cost of doctor visits (and the time to see the doctor), prescription medications and other factors involving "conventional" health care, silver is a tremendous value. It is available without a prescription and can be used with utmost confidence.

5. **Emergency Preparedness**. Because silver solution is inorganic with no chemicals or other additives, it can store for longer durations. In addition, silver can purify water in as little as 4 minutes.
6. **Extremely Safe.** Research, testing and long-term use show that silver in nano crystal form is completely safe for everyone. There has been no reported complaints involving silver solution and no negative side effects such as those witnessed with most prescription drugs.

There are many, *many* other medical and non-medical uses for silver. These are just a few. Use your imagination, and you'll surely come up with dozens more! The history is clear, from ancient times to the present, man has known of the powerful health benefits of silver. Only need is to remind.

Note:

1. **Please avoid, if allergic to silver.**
2. **Don't use internally if kidney function is impaired.**
3. **Take advice from medical practitioner if pregnant or nursing.**

Test for Allergic to silver:

Put a Silversafe soaked cotton/gauge on arm topically and allow it to position there for 3-4hrs. If there is no reddish skin or allergic symptoms, you can safely use.
